

**Mattson  
Macdonald  
Young** structural engineers

Melissa is a country girl at heart who loves being outdoors and growing things. When not deciphering the scribbles of engineers at the office, she enjoys spending her time with her husband, son, and pets. She loves exploring parks and trails, camping, canoeing, and especially gardening. She also enjoys tickling the ivories.

### **Melissa Breiter, BIM Manager/Engineering Technician**

Melissa joined MMY in 2006 as an Engineering Technician. She uses Revit to create 3D structural models and construction documents. As the BIM Manager at MMY, Melissa is a self-starter who has an in-depth knowledge of Revit and is responsible for developing, documenting, and implementing company production standards for Revit. She actively maintains the company Revit template and loves finding ways to improve it and MMY processes. She assists with project coordination with clients and coworkers as needed to streamline Revit workflows. She also hosts Revit meetings and provides training, software updates and support, and troubleshooting for Revit and AutoCAD users in the office.

Melissa enjoys the wide variety of projects we work on at MMY, including everything from sculptures and park shelters to houses, apartments, offices, large warehouses, and historic buildings. She especially enjoys the odd and unusual projects that MMY tackles and figuring out how to make those work in Revit.

#### **Education**

Bachelor of Arts in Environmental Studies – University of Minnesota Duluth, 2001

Associate in Applied Science in Architectural Drafting and Design – Hennepin Technical College, 2006
